CORE SKILLS

Generative AI & Agents

LangGraph · RAG · AWS Bedrock · MCP · Prompt Engineering · LLM Architecture

Machine Learning

AWS SageMaker · Model Training Pipelines

Big Data & Data Eng

Apache Spark · Kafka · Airflow · Flink · Polars · Elasticsearch

Languages

Python · Java

Databases & Storage

ScyllaDB · Cassandra · Redis · MySQL · Parquet · Avro

Cloud & Infrastructure

AWS · Kubernetes (K8s) · EC2

EDUCATION

Information Systems, B.Sc.
The Academic College of Tel-Aviv Yaffo

Software Product Management
University of Alberta

MILITARY SERVICE

Intelligence Analyst
Unit 8200, IDF

Dynamic and results-oriented AI Engineer with over 5 years of expertise spanning Big Data, high-scale backend architectures, and machine learning. Proven track record of designing and deploying production-grade LLM solutions, alongside experience leading engineering teams to build robust, low-latency distributed systems using Python, Java, and AWS.

PROFESSIONAL EXPERIENCE

AI Engineer | Dynamic Yield — 2025 – Present

- Architect and deploy an autonomous e-commerce shopping agent with full transactional capabilities, built from the ground up utilizing LangGraph, RAG architectures, and the Model Context Protocol (MCP).
- Integrate foundational models into core services via AWS Bedrock, optimizing for low latency, high availability, and efficient system performance.
- Drive AI pipeline efficiency through advanced prompt engineering, token usage optimization, and strategic LLM caching mechanisms to reduce costs and improve response times.

Team Lead | Dynamic Yield — 2024 – 2025

- Led a team of 4 engineers, introducing modern engineering best practices, agile methodologies, and fostering a strong culture of ownership and continuous improvement.
- Drove the technical architecture, design, and implementation of core backend systems, laying the groundwork for advanced LLM-based solutions.
- Oversaw the end-to-end integration of complex data models into high-scale platforms, ensuring reliability and optimal performance for downstream consumers.

Big Data Developer | Dynamic Yield — 2021 – 2024

- Designed and developed high-scale, low-latency backend data services utilizing Java and Python within an AWS ecosystem.
- Engineered and optimized machine learning model training workflows and data pipelines leveraging AWS SageMaker.
- Architected, developed, and maintained complex distributed data processing flows using Apache Spark and Apache Airflow.
